13+ Yrs Experience | 150 Engineers Led | $5M+ Programs Delivered | $3M Cloud Budgets Managed | 40+ Enterprise Clients | 99.9%+ Platform Reliability

PROFESSIONAL SUMMARY

Engineering leader with 12+ years of experience building and scaling cloud-native platforms, engineering organizations of 30–150 engineers, and AI-driven SDLC transformation programs across Healthcare, FinTech, SaaS, and IoT domains. Proven ability to own $1M–$3M infrastructure budgets, deliver 99.9%+ platform reliability, and reduce cloud costs by 20–30% through FinOps governance. Led delivery of 18+ large-scale global engineering programs with cumulative contract value exceeding $5M, serving 40+ enterprise clients.

Recent focus on AI-native engineering transformation — architecting and leading adoption of GitHub Copilot, Claude, and OpenAI-based developer workflows across 50+ engineers, improving developer productivity by 20–35%. Built an in-house AI-powered development platform saving 600+ engineering hours per month and delivering measurably faster release cycles.

CORE COMPETENCIES

Engineering Org Leadership (Up to 150 Engineers, Multi-location) | Cloud Architecture & Multi-Cloud Strategy (AWS, Azure, GCP) | Platform Engineering & Microservices | AI-Driven Engineering & SDLC Transformation | DevOps, CI/CD & SRE | FinOps & Cloud Cost Optimization | Enterprise Program Delivery & Governance | API & Distributed Systems Architecture | Automation, RPA & Intelligent Workflows | Executive-Level Stakeholder Management

WORK EXPERIENCE

Predikly Technologies Pvt. Ltd. | Cloud & AI Engineering Consulting — *Jun 2018 – Present*

Senior Engineering Manager

Engineering Leadership & Delivery

- Grew engineering organization from 5 to 150 engineers over 4 years across multiple geographies, establishing team structures, career ladders, and management layers to support enterprise delivery at scale.
- Improved on-time delivery from ~70% to 90%+ across $2M+ in concurrent program delivery through structured Agile governance, OKR alignment, and program execution frameworks.
- Mentored engineering managers and technical leads; improved team productivity by 20–30% through structured 1:1s, coaching frameworks, and skills development programs.
- Established engineering governance model aligning product, architecture, and delivery — reducing planning overhead and improving cross-functional execution efficiency.

Cloud & Platform Modernization

- Led multi-cloud transformation across AWS, Azure, and GCP, modernizing legacy monolithic systems into cloud-native microservices architectures.
- Designed and implemented Kubernetes-based platforms using Docker and Terraform; improved system scalability by 30–50%, enabling 2–5x traffic growth.
- Built enterprise observability stack using Prometheus, Grafana, and CloudWatch — achieving 99.9%+ uptime across production workloads.
- Managed cloud infrastructure budgets of $1M–$3M annually; delivered 20–30% cost reduction through FinOps governance, rightsizing, and Reserved Instance strategies.
- Reduced deployment cycles from hours to under 15 minutes via CI/CD automation (Jenkins, GitLab CI/CD), enabling multiple daily production releases.

AI & Engineering Transformation

- Led enterprise-wide adoption of GitHub Copilot, Claude, and OpenAI-based workflows across 50+ engineers; improved developer productivity by 20–35%.
- Designed and implemented an AI governance framework covering security standards, responsible AI adoption, and usage policies across the engineering organization.

- Architected and led development of an in-house AI-powered development platform adopted by 50+ engineers, saving 600+ engineering hours per month — covering requirements analysis, code generation, automated testing, and documentation.
- Built an in-house ML platform consolidator saving 150+ engineering hours per month by standardizing model integration, experiment tracking, and deployment pipelines.

Nibo Technologies | Enterprise Web & RPA Solutions *Jun 2017 – May 2018*

Technical Lead

- Led full-stack development of enterprise web platforms and RESTful APIs with microservices-based backend architecture for high-availability production systems.
- Led cloud migration initiatives and DevOps automation pipelines, improving deployment reliability and reducing manual operational overhead.
- Implemented RPA-driven automation solutions reducing manual operational effort by 30–60% across enterprise business workflows.
- Drove cross-functional collaboration across product, QA, and infrastructure teams to enhance system performance and scalability.

MindChipps Consulting Pvt. Ltd. | IT Consulting & Custom Software *Jul 2013 – May 2017*

Senior Software Developer

- Designed and led development of enterprise web and backend platforms using .NET, Node.js, and PHP with focus on scalable, high-availability architecture.
- Built and optimized RESTful APIs and distributed backend services for enterprise-scale integrations across multiple industry verticals.
- Contributed to cloud transformation and early CI/CD pipeline adoption; drove infrastructure modernization across client engagements.
- Drove performance optimization efforts improving application efficiency, response times, and overall system reliability across production deployments.

SELECTED PROJECT HIGHLIGHTS & OPEN SOURCE

InnerSpace | AI Personal Growth Companion (Open Source) — github.com/amitgaikwad2837/InnerSpace
Privacy-first React Native iOS/Android app. 35+ AI specialist helpers across 9 life categories, AES-256-GCM on-device encryption, multi-provider AI (Claude, OpenAI, Gemini, Groq), local on-device AI mode, 10-language support. No backend — all data stays on device. TypeScript, Expo SDK 56, Zustand, i18next.

API Contract Drift Detector — github.com/amitgaikwad2837/api-contract-drift-detector
Developer tool that detects drift between OpenAPI specs and backend implementations before it reaches production. Catches breaking changes, missing endpoints, and type mismatches in CI/CD pipelines. TypeScript.

AI-Powered Migration Generator — github.com/amitgaikwad2837/ai-powered-migration-generator
Generates production-ready database migrations from schema diffs using AI — eliminating manual migration writing with rollback support. TypeScript.

Architecture Decision Record Generator — github.com/amitgaikwad2837/architecture-decision-record-generator
Automatically generates Architecture Decision Records (ADRs) from pull request metadata. Keeps architecture documentation current with zero manual effort. TypeScript, GitHub Actions.

Tidal-X | Aquaculture AI Platform (Current Client)
Leading engineering delivery of a computer vision and AI/ML-driven aquaculture monitoring platform on GCP, Kubernetes, React, Python, GoLang, BigQuery, and Prometheus/Grafana observability.

TalkOut | Wellness Platform
Architected and delivered a cloud-native multi-tenant wellness platform using React, .NET Core, MongoDB, Terraform, Kubernetes, and Docker — designed for high availability and scale.

Quantum Analytics | FinTech ML Platform
Led design and delivery of a machine learning analytics platform using Python, R, and PostgreSQL — delivering predictive analytics and portfolio intelligence for FinTech clients.

Clinivintage | Healthcare Interoperability Platform
Led development of a healthcare platform with HL7 interoperability using Java, Angular, and PostgreSQL, enabling clinical data exchange across enterprise healthcare systems.

Enterprise RPA Programs | Transportation, FinTech, Oil & Gas

Delivered RPA automation for Roehl (Transportation), AFN (FinTech), and DCP Midstream (Oil & Gas) — reducing manual effort by 30–60% across 50+ business-critical workflows using Automation Anywhere and .NET.

18+ additional programs across ML, IoT, Healthcare, HRMS, SaaS, and FinTech. Full project list: github.com/amitgaikwad2837

TECHNICAL SKILLS

Languages & Frameworks: .NET, GoLang, Python, R, Node.js, PHP, TypeScript, JavaScript, React, Angular, HTML5, CSS3, Flutter, Xamarin

Cloud & Infrastructure: AWS, Microsoft Azure, GCP | Kubernetes, Docker, Microservices, Serverless | Terraform, Helm | FinOps, Multi-cloud Architecture

AI & Data: Claude, OpenAI, GitHub Copilot, Prompt Engineering, AI-SDLC | PostgreSQL, MongoDB, MySQL, BigQuery | Predictive Analytics, Anomaly Detection

DevOps & Observability: Jenkins, GitLab CI/CD, DevSecOps | Prometheus, Grafana, CloudWatch, Azure Monitor | Release Automation, SRE

Automation & RPA: Automation Anywhere | Enterprise Workflow Automation | Intelligent Process Automation

Analytics & Reporting: Power BI, AWS QuickSight, Tableau | Real-time dashboards, KPI-driven analytics

Leadership & Process: Agile/Scrum, OKR Frameworks, Engineering Governance, Program Management, Jira, Azure Boards

PROFESSIONAL DEVELOPMENT

Certifications & Training

Generative AI with Large Language Models — *Coursera / DeepLearning.AI*	*2024*
GitHub Copilot for Business — AI-Assisted Development — *GitHub Learning*	*2024*
Machine Learning Specialization (Andrew Ng) — *Coursera / DeepLearning.AI*	*2023*
AWS Cloud Practitioner Essentials — *AWS Skill Builder*	*2023*
Introduction to Kubernetes (LFS158) — *Linux Foundation / CNCF*	*2022*
FinOps Practitioner Training — *FinOps Foundation*	*2022*
Engineering Management & Leadership — *LinkedIn Learning*	*2022*
Certificate of Excellence — RPA Development — *Automation Anywhere Academy*	*2018*

EDUCATION

Bachelor of Engineering, Information Technology *2013*

North Maharashtra University | First Class with Distinction
